* A few first-generation Edge 57 units have tempered panels - inspect carefully for the tempered symbol before drilling.

Tempered panels are marked with a small, white, round silkscreen emblem near the edge of the panel near a seam. Search panels thoroughly for this emblem prior to drilling.

Drilling non-tempered glass is not a foolproof operation - non-tempered glass can still shatter if improperly handled.

Please be advised that this is for informational purposes only, and that the user who attempts to modify a Deep Blue tank does so at one's own risk.

User modifications to a DB tank will void the warranty.
